BUYER'S GUIDE	15

Thirty-ton lifting capacity . . . 100 feet of long-reach boom . . . 61,000-plus lbs. of live working weight. Some of the vital statistics on the proud HC-78A, the first and only 30-ton truck-crane in the 3/4-yd. class with only 8 ft. overall width. This all-new machine gives you so much more, yet your investment is still *25-ton dollars*.

Fully convertible, the HC-78A has a snug 8-ft. overall width (you have a choice of two road-quick carriers). National width and weight "permit-ability" gives you the "go sign" anywhere. Forget pesky over-the-road travel restrictions.

Many other Link-Belt Speeder features make this job-winning Zephyrcrane your best choice. Exclusive Speed-o-Matic power hydraulic controls assure the pinpoint accuracy no truck-crane can afford to be without. And another exclusive, Full-Function Design, gives you an independent, 2-directional power flow for each machine function; independent power load lowering (reversing) clutches for either or both main drums; independent third operating drum; independent boom lowering clutch.

For the past few years the HC-78A was strictly *our* machine—on our engineering design boards—in our modern factory—on our gruelling test grounds. Now this great machine is *yours!* Yours—for wider profit margins on every job.
